- **Range in hue variation** from minimum to high.
JEWEL PALETTE (J) Gems that crackle and sparkle.

A feat of chemistry creates this signature look: we begin with a base glaze, and pour deep crackles into the pools of each design. The base stays visible at the edges and high points, while crackles sparkle in the cavities.

Tip: (1-4) Numbers after each glaze name indicate its jewel "family." Matching numbers can be used together for multi combinations.
Tip: (1-4) Numbers after each glaze name indicate its jewel “family.” Matching numbers can be used together for multi combinations.

JEWEL PALETTE (J) Gems that crackle and sparkle.

Tip: (1-4) Numbers after each glaze name indicate its jewel "family." Matching numbers can be used together for multi combinations.
GO CUSTOM WITH MULTIPLE JEWEL COLORS ON A DESIGN.

1. Choose a glaze family (numbered here from 1 to 4).
2. Within that family, choose your own combination of jewels to apply to your design. Some designs can accommodate 2 jewels ($J^*$), some can even hold 3 ($J^{**}$).

STONE RANGES  The perfect element to blend with our palettes.

STONE RANGE CHARACTERISTICS
All natural stone products have an inherent variation in color, thickness, texture and shading. This may occur within a piece and from piece to piece. Samples and photos are only to be used as an indication of color and range. Stone is not sold separately, it is only available in ceramic & stone blends. We cannot guarantee a visual match for add-on orders, or in coordinating with your other vendors.

**YOUR KEY TO COLOR:**

Listed under each piece are letters (G, M, C, P, J**, Q, S) representing the different glaze palettes that are available to pair with that piece. Each palette behaves differently on a given carving style.

---

47 All glazes are hand applied by artisans. Variation is appreciated and expected.
BORDERS
Motifs that stand the test of time, inspired by artists from Fabergé to Michelangelo. Shown in Silver crackle.
Anticipation deco field and 2x6 field in Alabaster sheer.

Featured: **ANTICIPATION DECO FIELD**

Available glazes: glosses, mattes, crackles, precocious, jewels, quartz and sheer glazes.

Tip: Create a subtle look with a matte or a neutral crackle, or build a bold wallpaper statement with saturated color. To see more textured field info and inspiration, visit encoreceramics.com/textured-and-deco-field/

Anticipation: Silver crackle
Available in glosses, mattes, crackles, precocious, jewels, quartz and sheers.

Anticipation: Blues multi
Available in glosses, mattes, crackles, precocious, jewels, quartz and sheers.

Anticipation: Gimlet & Glacier jewel multi
Available in glosses, mattes, crackles, precocious, jewels, quartz and sheers.
TEXTURED & DECO FIELD  
*Motifs worth repeating.*

**Emerson:**
- Bianca matte
  - Available in glosses, mattes, crackles & sheers.
- Silver crackle
  - Available in glosses, mattes, crackles & sheers.
- Storm crackle
  - Available in glosses, mattes, crackles & sheers.

**Whitman:**
- Bianca matte
  - Available in glosses, mattes, crackles & sheers.
- Silver crackle
  - Available in glosses, mattes, crackles & sheers.
- Waterfall crackle
  - Available in glosses, mattes, crackles & sheers.

*Available in glosses, mattes, crackles & sheers.*

3 x 8 Eliot texture: Cashmere crackle.
*Available in glosses, mattes, crackles & sheers.*

3 x 8 Eliot texture: Stream crackle.
*Available in glosses, mattes, crackles & sheers.*
TEXTURED & DECO FIELD  Motifs worth repeating.

Manarola: Bianca matte. Available in glosses, mattes, crackles, jewels, quartz and sheers.

Manarola: Gimlet and Glacier jewel multi. Available in glosses, mattes, crackles, jewels, quartz and sheers.

Manarola: Azul and Luna jewel multi. Available in glosses, mattes, crackles, jewels, quartz and sheers.

1. Applications
Our tile is vitreous and frost resistant. It is suitable for indoor and outdoor applications, areas that experience freeze/thaw conditions, water applications (baths, pools, saunas, steam rooms, fountains, and showers), fireplaces, and light traffic floors. Both residential and commercial uses are acceptable. Our social media accounts offer beautiful examples of installations for inspiration. Look for us on Facebook, Twitter, Pinterest, Instagram, and Houzz.

2. Variation and Range
Our glazes are designed to reflect our hand application, which causes them to vary from batch to batch, and from tile to tile. Glaze variation is both expected and appreciated, as it is a significant part of creating a gorgeous finished installation.

   This variation is achieved in two ways:
   - All glazes are hand applied by artisans.
   - All glazes are made of natural materials, which may shift from batch to batch in intensity or hue (much like specialty stone).

To create the most beautiful looks, many of our colors contain multiple applications of different glazes. These layers then create a series of complex reactions that we call "the party in the kiln." The end result is stunning, but this complexity does make it impossible for us to control certain elements or behaviors of a single color. This is why we say to expect RANGE in your order. Glaze colors may also appear lighter or darker in different sized cavities within a design. The use of natural materials in our glazes can result in a shift in the color and behavior of each glaze over time. Additionally, reference samples may not reflect the full range to be expected in an order. Please refer to multiple samples of a glaze, as well as our range guides before finalizing your order. For high range glazes, please consider ordering a current sample of at least 2-4 pieces.

3. Lead Times
All products are made to order, and our lead times reflect this. Typically, we assign target ship dates 3 to 5 weeks out, though large orders may require more time to produce. Special Order product and glazes take longer to produce, and the lead time for orders that include them will be 5 to 9 weeks. The lead time for gradient blend orders is at least 8 weeks depending on the size of the order, which is further explained in our gradient blend section below. High demand may temporarily lengthen lead times. Call to find out our current lead times. While 98% of our orders ship on or before the target ship date, there are no guarantees in handcrafted ceramic manufacturing.

4. Returns and Cancellations
Any changes to an order must be submitted with 24 hours of receiving the original order. All revisions and cancellations must be received in writing, and there are NO CHANGES OR CANCELLATIONS after 24 hours. If an add-on order is necessary, please reference the original PO number in all paperwork. However, we discourage add-on orders due to the artisan nature of our products. Variation in glaze color between shipments must be expected. Please make sure to order enough product to finish your project, with some overage for breakage and piece preference. All orders are custom-made. Consequently, there are NO RETURNS.

5. Photo Disclaimer
We have included photographs of glaze range and finished installations to inspire you in your design process. However, printed photographs are inadequate to fully communicate the visual and tactile aspects of our products. Do not order based on photos, and always obtain current samples before placing your order.

6. Stone Disclaimer
As is standard in our industry, stone may vary in size and thickness. Stone is a natural material and varies in appearance, hue, and texture from vendor to vendor and lot to lot. We cannot guarantee a visual match for add-on orders, or in coordinating with your other vendors.

7. Gradient Disclaimer
Because of the special attention and care we put into each gradient blend order, any cancellations or order modifications must be submitted within 24 hours of receiving the original paperwork. The design process for your order begins immediately, and any alterations affect our calculations. As with all Encore orders, there are NO returns for gradient blend orders.

FAQ’S ON INSTALLATION, SEALING & MAINTENANCE

Q: Do I need to seal my tile?
A: We recommend that you seal your tile to increase the ease of installation and ongoing maintenance. SEALING IS CRITICAL FOR CRACKLE AND SHEER GLAZES to protect your tile from materials that may stain. Sealing matte glazes can also protect the finish by filling microscopic pores that may otherwise trap discoloring materials.

Q: What kind of sealant should I use?
A: We’ve found that oil-based penetrating sealants offer the best protection against stains. If your installer has another preference, don’t worry; any kind of ceramic sealant is safe to use with our product. No matter what kind of sealant you use, just make sure to follow the manufacturer’s instructions for maintenance and resealing.

Q: When should I seal my tile?
A: We recommend sealing your tile before grouting to prevent the grout from seeping into any cracks or pores in the surface of the glaze and creating a haze. We also recommend sealing after grouting to protect your grout from stains as well. Many sealants are suitable for sealing both ceramic products and grout.

Q: Do I need to reseal my tile?
A: You should always follow the sealant manufacturer's instructions for resealing and maintenance.

Q: What kind of grout should I use?
A: Grout is really a matter of personal preference because any grout will work with our product. We make our grouted sample boards with sanded grout in neutral colors because we like the aesthetic, but feel free to mix it up! There are all kinds of elements that can affect your grout selection, including cabinet and paint color, flooring, and plumbing fixtures, so you will be able to make the best decision because you have the best understanding of how the room fits together. Your installer, your designer, or your local hardware store will also have some great recommendations for grout.

Q: Are your products safe for pools?
A: Absolutely! Our tiles are vitreous, which means that they are waterproof and can withstand freeze/thaw conditions, so they are perfectly protected against any kind of weather.

Q: How do I clean my tile?
A: We recommend wiping your tile clean as needed with a non-abrasive pH-neutral soap, such as diluted dish soap. Stronger chemical cleaners won’t damage our tile, but they may eat away at the sealant or grout.

Q: Are acidic pool cleaners safe for your tile?
A: Occasional contact with acidic products should be okay. Prolonged contact with acidic materials can eat away at the tile sealant or the grout between tiles. Our product testing hasn't shown for certain that strong acid will damage our tiles, but many strong chemicals can have an effect on ceramic and stone over time. Because of that, we recommend diluting some cleaning materials like muratic acid, which is typically in line with the acid manufacturers' usage instructions. If you can find pH-neutral cleaning products that will do the job for you, we always recommend using those as often as possible.

ENCORE TILE IS IDEAL FOR:
GREEN FROM THE GROUND UP
BEFORE (AND AFTER) GREEN BECAME COOL, OUR SUSTAINABLE MANUFACTURING IS STILL MAKING WAVES.

SAVING ENERGY
Solar panels keep us on the bright side of energy use. We were at the forefront of solar business solutions, and our installation was originally one of the top ten largest in the Northwest. With 176 sharp 165 watt solar panels on our roof, we generate 35 megawatt hours annually. This saves over 70,000 lbs. of CO2 emissions every year!

SAVING WATER
Our factory is located on the Rogue River in Southern Oregon. The thriving local ecosystem has this river at its foundation, and we make sure it stays pristine. We wouldn’t dream of disposing of raw mineral waste down the drain. Our tile factory is the first we’ve ever seen to capture and distill all production waste water - without a single floor drain.

* Dramatically reduced water footprint.
Making tile is usually a water-intensive business. By designing our own clay body, glazes, and custom water recycling processes, we save almost half the water consumed in standard tile manufacturing - more than 40,000 gallons of water each year.

PUSHING PHYSICS TO THE MAX
We push physics to the max to be as green as possible. Our single-fire process saves 40% of the energy typically used to make tile. This is tough to do by any measure, but the gorgeous glazes in our collections make this an incredible feat. Our specialty kiln shelves save another 15% electricity.

CUTTING RAW WASTE COMPLETELY
Engineered efficiency, way beyond a little recycling. ALL raw waste is captured in our unusual production process. We’ve custom designed extra steps to collect all waste clay, glaze, and water, and recycle it until it leaves the building as a finished tile. And for pieces that don’t quite make the cut, our rejects are donated to local schools for at-risk youth, and Habitat for Humanity.

MORE THAN LIP SERVICE
We’re passionate about the tile we make, the way we make it, and the people who design beautiful spaces with it. We love our community, so we do everything we can to make our process as green as possible.

We hope you share in our excitement, that every space you design with our tile is:

* Creating U.S. jobs 
* Diverting waste from landfills 
* Avoiding CO2 emissions 
* Saving water 
* Protecting natural areas 
* Made in a way that is safe for the artisans that produced it
